WHO WE ARE?

PIE INFOSYSTEMS IT solution is a software consulting and product development company based in India. We are specialized in delivering solution and products in business process automation, customized application Development development and Web web based Applicationsapplications, with success of delivering a high standard of service to many different organizations for the past 5 years.

We have in-depth understanding of business need and the IT challenges affecting our clients, and we pride ourselves on providing cost-effective and perfectly tailored solutions that take into account your wider business requirements. With a focus on up front, in depth analysis of your requirements, our motto is to provide sustainable and strategic solutions, in a timely and flexible way.

Our Mission is to "Add Value Through Strategic Business Alliance". We have mainly worked on developing different products ranging from customized enterprise solutions, business process automation, web-based workflow management solutions, e-commerce & web-based CMS and website maintenance for our growing list of clients. We ensure that we provide high quality services to all our clients, from web

MISSION

PIE INFOSYSTEMS is committed to providing the highest standards of development and integration of web enabled application and services through:

- ✓ Understanding both the customer's IT requirements and the business process involved.
- ✓ Multi-level testing the solution prior, during and post deployment.
- ✓ Continuously training programmers on the latest technologies.
- ✓ Managing projects according to international project management methods.
- ✓ Ensuring professional customer support and warranty services.

VISION

We bring a holistic vision to the IT needs of the enterprise; This vision is about unlocking strategic value hidden in segmented and fragmented data and providing leading technologies that give **PIE INFOSYSTEMS** client unparalleled insight of their business.

WHAT DO WE DO?

We help our client integrate their business and IT processes into a coherent whole. We create flexible, robust IT solutions that are geared specially to our clients' business needs and processes.

We get to know our clients and their business so we can give them the best return on their IT investments.

We show them how to unlock the strategic value hidden in segmented and fragmented data and we provide leading technologies that give them unparalleled insight into their businesses which results in speedy and measurable benefits to client organizations, and thereby providing returns on their investments

WE VALUE

- ✓ Honesty and integrity, which generate long-term client loyalty.
- ✓ A sincere focus on providing exceptional customer service.

WE ARE COMMITTED TO

- ✓ Promoting innovation in everything we do.
- ✓ Personal excellence and self-improvement.

OUR DELIVERY PROCESS

1.1

SOFTWARE DEVELOPMENT PROCESS

We are flexible in our development approach, Though we recommend working with Agile wherever possible, we follow it but based on the requirements we may decide on waterfall

Requirement Engineering

a

Our requirement analysts works closely with our technical team during various phases of discussions with the client to understand his business and propose the right technical solutions to reach clients business goals.

Our core expertise lies at creating highly intuitive, interactive and expressive software, web and desktop applications.

Our technical team makes sure that the software developed will meet the requirements of the product, as well as ensuring that future requirements can be addressed

b

Design & Development

Testing & Deployment

c

A part from unit testing by developers, we also have a separate quality assurance team composed of ISTQB certified testers than make sure that the products/projects we deliver to our clients are of high quality functionally as well as works seamlessly on various devices, resolutions and browsers.

We believe a project is never finished after go-live.

After the project we need to support the client by on going maintenance tasks, build the system further to meet new business challenges the client faces and so on.

d

Support & Maintenance

OUR DELIVERY PROCESS

1.2 Testing Process

Our verification & validation processes follow very stringent & proven methodologies for Quality Assurance. Even more, our development methodology closely embraces test driven development practices thereby making quality consciousness ingrained in our development process itself.

Data Security

1.3

The safe handling of data is very much important in this age because if the classified data falls into the hands of the wrong person could have drastic implications to the organization and could lead to loss of business, trust, and money. IP Details's security policy ensures safe and secure management of data.

OUR DELIVERY PROCESS

1.4

Software Development Methodology

We follow the **Agile Software Development methodology**, which refers to a group of software development methodologies that are based on similar principles.

There are many agile **methods** available, of which we find that **Extreme Programming** and **Scrum** are the two methods that are best suited for us to provide you the maximum benefits.

Any one of these methods alone has inherent drawbacks.

So we have adopted a hybrid method by blending the benefits of both.

Among the different agile **practices**, we have adopted **Test Driven Development** and **Continuous Integration**. Again, any one of these practices alone limits the flexibility in some solution development situations. So we have gone in for the concoction that is difficult for our competitors to beat.

OUR MAJOR CLIENTS

The foundation of our success is built upon the partnership we have created with our customers through quick response, and by providing appropriate and innovative solution enabling our clients to serve their customers effectively, and thereby providing returns on their investment.

Our services are tailored to your needs with optimized processes that use the latest technology innovations alongside a team of seasoned technical consultants and business analysts.

1 Development:

PIE INFOSYSTEMS objective is to develop enterprise software applications that goes beyond the expectation of our clients. Our custom software development services embrace the full spectrum of software technologies across an extensive array of industries and domains.

PIE INFOSYSTEMS has expertise in developing scalable software applications and innovative mobile applications for companies across the globe. We achieve this through a collaborative approach by involving our clients at each stage. We look beyond the technical coding part and focus more on the core purpose of the software application and how it aligns with your business objective.

2 IT Management:

IT Management service involved in designing, creating, delivering, supporting and managing the life cycle of IT services.

Well, of course it does, but what are IT services?

Think of any piece of technology you use at your workplace – your laptop, the Apps installed on it, the printer that your entire team uses, or the option to reset your password even after the first 15 times.

They're all services provided by your IT team. In other words – IT services.

Although the most common perception of IT management among IT users (employees) is just "IT support", IT management goes way beyond resolving day-to-day issues.

Your IT team is responsible for end-to-end management of these services. They might use an IT Management software like Fresh service to effectively manage these services.

With that basic introduction out of the way, check out this video where Stephen Mann sums up IT Management and its relationship with the business.

Consulting | Infrastructure | Tech Support | SAAS

3 Devops and Data Services

Transforming businesses through cutting-edge data solutions and DevOps CI/CD services, we optimize efficiency and innovation. Seamlessly transition your data from one cloud to other with our expert assistance. Our dedicated team ensures a smooth and efficient migration process, minimizing downtime and maximizing data integrity.

4

Quality Testing is a process of evaluating the functionality of a software application to find any software bugs. It checks whether the developed software met the specified requirements and identifies any defect in the software in order to produce a quality product.

It is basically executing a system in order to identify any gaps, errors, or missing requirements in contrary to the actual requirements.

It is also stated as the process of verifying and validating a software product. It checks whether the software product :
